## **Moulding Selection Guide**

# MOULDING & MILLWORK

making interiors spectacular

Moulding & Millwork is North America's leading supplier of mouldings. We offer the largest and most innovative selection of quality products. Take advantage of virtually endless possibilities.

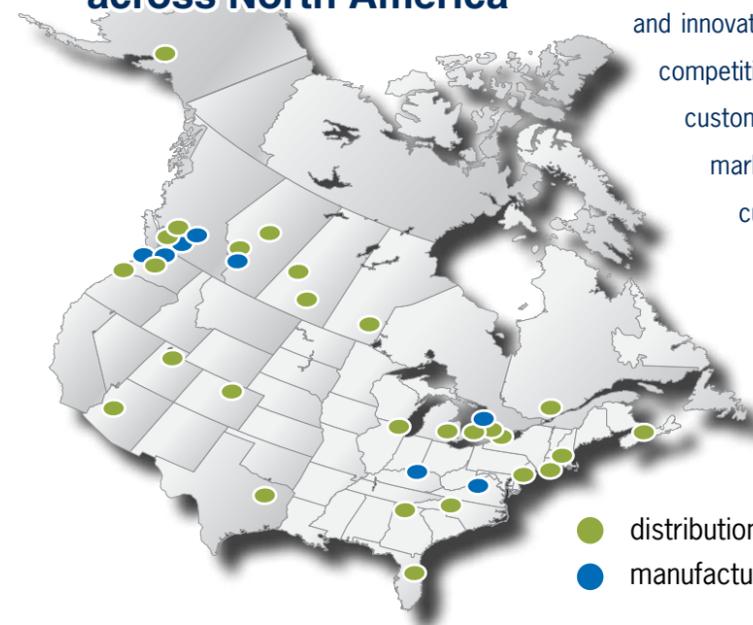

## Moulding & Millwork History & Culture

Established in 1926, Moulding & Millwork has become one of the largest suppliers of wood mouldings in North America, including pine, oak, poplar, hemlock, mahogany, maple, cedar and LDF mouldings. With multiple modern manufacturing facilities, sales facilities and warehouse facilities, we are able to satisfy regional product needs and provide superior local market service.

Moulding & Millwork's vast global supply network includes manufacturing plants as well as leading vertically integrated moulding producers from around the world. Deep inventories of quality moulding products, combined with specialized knowledge of customer needs, buying power and financial strength, yield near perfect fill rates on a next day ship basis. Our strength in production and manufacturing ensures short lead times and the flexibility to respond quickly to customer needs, contributing to the growth of our customer's businesses!

Moulding & Millwork boasts some of the most advanced manufacturing equipment and processes available, including an in-house CAD capability that allows us to design consistently high quality profiles and products, with minimum waste. We are proud to offer our customers a selection of more than 5,000 moulding profiles.

## Over 35 locations across North America

At Moulding & Millwork, our strength is our people. Built on vision, focus and innovation, we encourage our employees to provide quality products, competitive prices and superior value through visionary marketing and a customer focus that maintains integrity in a competitive and dynamic market. Our vision has strengthened our commitment to our valued customers and will continue to strengthen our capacities in the future. We look forward to serving all of your moulding needs!

PROFILE  
 PROFILE SIZES  
 PROFILE SPECIES

- 1 **ARCHITRAVES:** In classical architecture, it described the main beam resting on the tops of the columns. Today it is often used as a decorative moulding for ornamentation or finishing at the top of windows and doors.
- 2 **BASEBOARDS:** Baseboards are placed along the wall at the floor. They should be chosen to work in harmony with your casings to finish and tie the room together. Baseboards are usually thinner than the casing.
- 3 **BUILD-UPS:** Combining two or more moulding profiles to create a new or custom look. Also called stacking, build-ups make it easy to create the look of custom made trimwork without the high cost.
- 4 **CASING:** Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.
- 5 **CROWNS:** Crowns are placed along the wall at the ceiling. They come in a wide range of patterns and sizes. Crowns soften the transition from wall to ceiling while adding a distinctive look and charm to your room.
- 6 **FINISH BOARDS:** Finish Boards come in either S4S (Surfaced 4 Sides) or S3S (Surfaced 3 Sides) and are used for a multitude of purposes including shelving, window liner, bases, casing, etc.
- 7 **PANEL MOULDS:** Panel Moulds are used to frame wall paneling and add an accent to your walls. Often used in furniture construction.
- 8 **RAKE MOULD:** Rakes are often used as crowns. In fact, they are sometimes called "solid crowns".
- 9 **WAINSCOT:** Trimwork installed in the area below a chair rail. Numerous options are available including raised panel, shadow box and beaded. Combined with a chair rail and baseboard, Wainscoting creates a dramatic look to any room.
- 10 **WINDOW STOOL:** Also called window sill, a Window Stool is the surface installed below the sash of a window. Trim installed under window stool creates a distinctive look and adds a decorative touch.

**GLOSSARY OF TERMS**

- BASE SHOES:** Base shoes are primarily used to trim flooring materials and are often used in combination with a traditional baseboard to conceal variations between the flooring and the base. However, this versatile profile works great to solve numerous trimming needs.
- BATTENS/OPEN TRIM:** A Batten/Open Trim is a narrow strip of wood used to cover joints or as decorative vertical members over plywood or wide boards.
- BEADED CEILING:** A popular profile used often as wainscot paneling. Combined with a chair rail or cap mould and a baseboard, beaded ceiling makes a distinctive wainscot package.
- BRICKMOULDS:** A Brickmould is mainly used as exterior casing around doors. 2 inches is the most common size, however, 1-1/2 and 1-1/4 inch sizes are available. Brickmoulds can also be used in place of a crown, and as a transition under window sills.
- BULLNOSE:** A term used to describe the eased edges of trim and stops. A single bullnose stop would have one eased edge and a square edge back. A double bullnose stop would have two eased edges.
- CHAIR RAILS:** Chair Rails are practical as well as decorative. Applied to a wall, from 24 to 48 inches up from the floor, they protect the wall from scuffs and dents from the backs of chairs as well as adding a beautiful accent to any room.
- CORNERS:** Corners are used to protect the outside edges of the wall from damage and abrasion. Corners come in a wide variety of sizes and detailing.
- COVES:** Coves are commonly used to soften the transition on inside corners but may be used for a wide range of applications.
- DENTIL:** A moulding pattern with a series of closely spaced rectangular blocks and spaces. Used especially in classic architecture.
- DOOR STOPS:** The Door Stop mouldings are attached to the door jamb on both sides and at the top. It is where the door comes to a rest when it is closed stopping the door from moving any further, and covering the gap that would otherwise appear between the door and the jambs.
- FULL ROUNDS:** Full Rounds are used for numerous purposes and projects. Some of the more common uses are closet poles, curtain rods and towel rods.
- HALF ROUNDS:** A cross section of a Half Round looks like a half circle and is used primarily as decorative trim. It works well as a trim piece for wall paper or to add a decorative pattern to flat panels. This profile can also be used to put a rounded edge on various shelving.
- HANDRAILS:** Handrails provide safety and support.
- QUARTER ROUNDS:** Quarter Rounds come in several sizes and serve a variety of functions. They are most often used with baseboards.
- RETURN:** Term used to indicate the method of carrying a mouldings detail from the front of the moulding back to the wall. Generally a 45 degree cut is made to the front of the long moulding and an opposite 45 is cut on a small piece to carry the detail to the wall.
- SCREEN MOULD:** A very versatile profile; Screen Mould fits a wide variety of needs and uses. Traditionally used to hold mesh screening into wood screens, it also works well as edge trim on various shelving or wood trim for wall paper etc.

## MANUFACTURING

**Moulding & Millwork is the World Leader in Hemlock Mouldings. Our Ferndale Facility is the Largest Hemlock Moulding Mill in the World.**

Moulding & Millwork exclusively manufactures Pacific Coast Hemlock,

Moulding & Millwork's Hemlock tallies of 6' to 20' cater to all of your project length requirements. These features enable us to efficiently provide our customers with the highest quality product in the market, with responsive lead times.

### Industry Leading Standards

Moulding & Millwork is an industry leader in quality and production standards and we provide our customers with a superior product. At 150,000 sq. feet our Ferndale facility is capable of running 1.6 million LF of Hemlock every week.

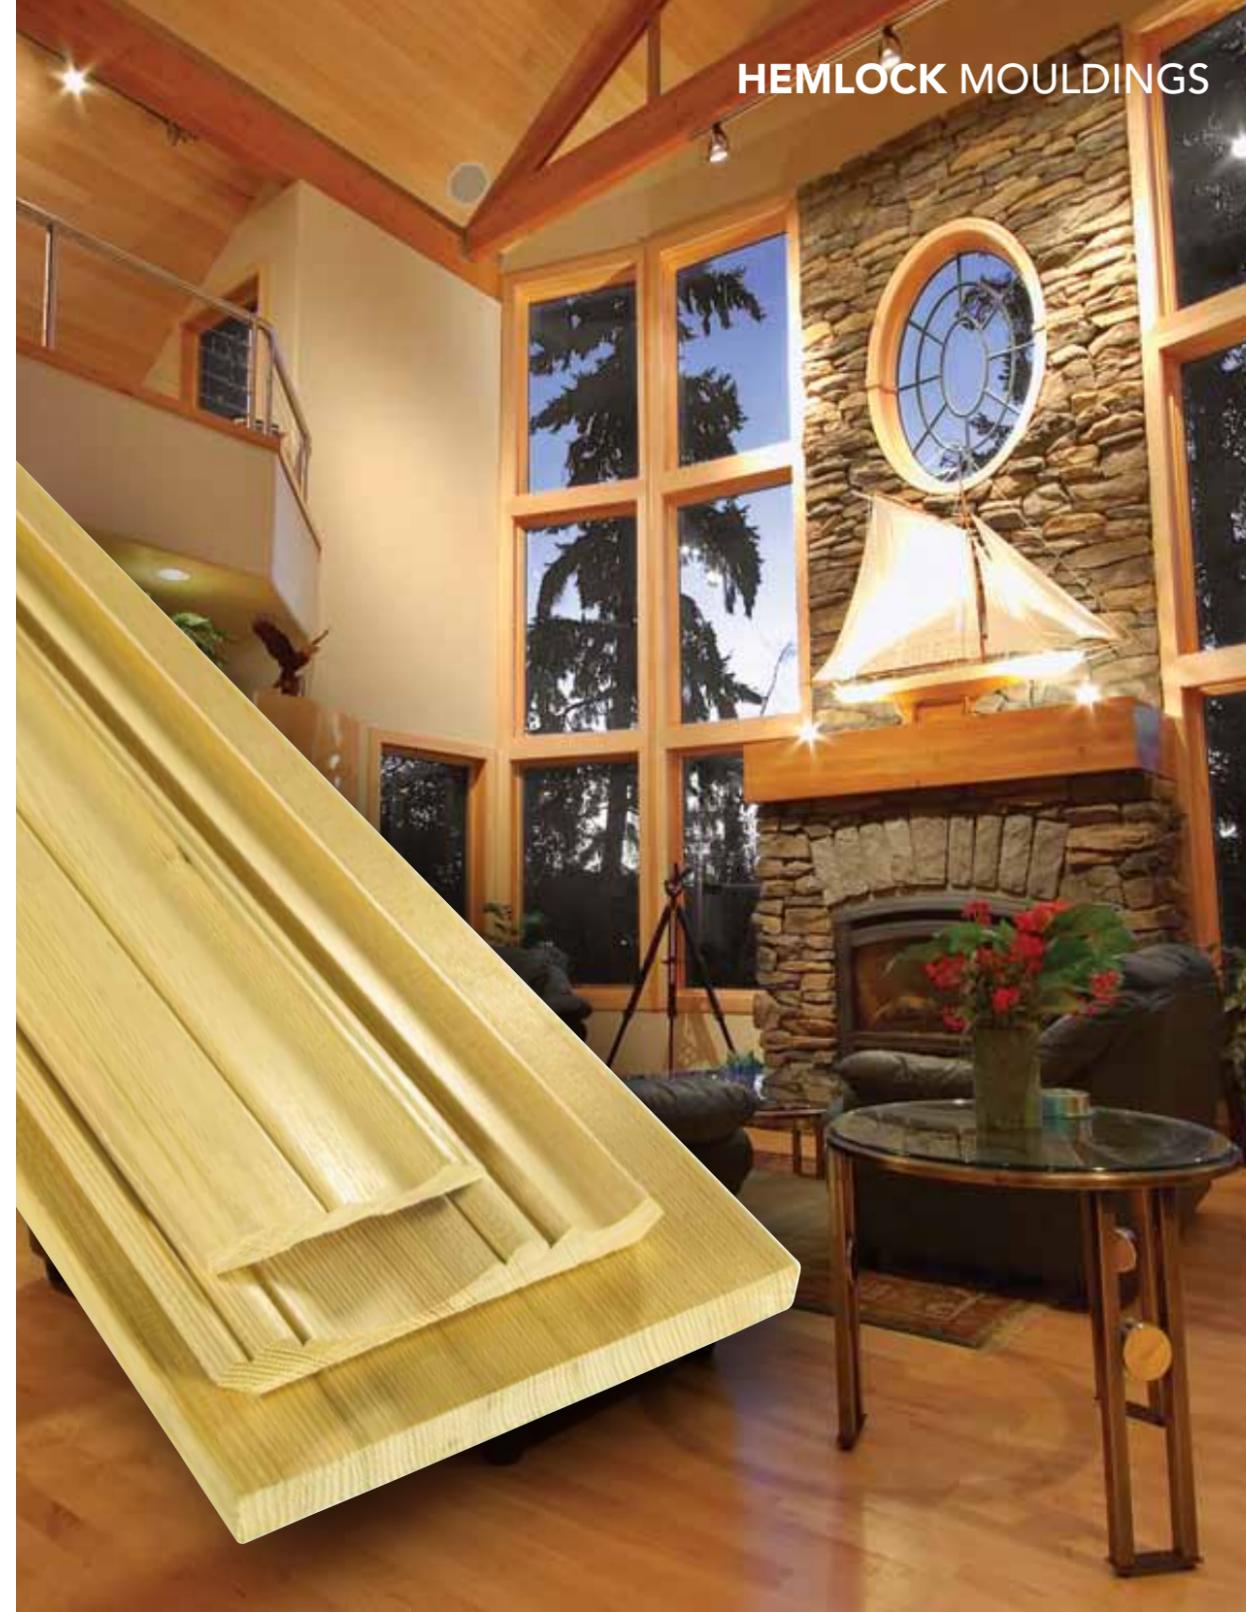

- Over 80 years of buying relationships with our key suppliers allows us to consistently source the best fibre in the market.
- Our in-house profile design department uses the latest CAD technology
- An ability to match existing or create new custom profiles
- Users of Weinig moulders, the leader in the industry
- Production tolerances of 0.2mm, four times the industry standard of 0.8mm

FERNDALE MILL

Moulding & Millwork's Pacific Coast Hemlock provides high-end results and exceptional value.

[www.mouldingandmillwork.com](http://www.mouldingandmillwork.com)

### HEMLOCK MOULDINGS

- Extremely smooth profile sanded moulded surface
- Perfectly suited to stain or natural finish
- Easily stained to match fine hardwoods such as cherry and walnut

Casings

Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.

Quarter, Half & Full Rounds

Quarter Rounds come in several sizes and serve a variety of functions. They are most often used to finish inside corners.

A cross section of a Half Round looks like a half circle and is used primarily as decorative trim. It works well as a trim piece for wall paper or to add a decorative pattern to flat panels. This profile can also be used to put a rounded edge on various shelving.

Full Rounds are used for numerous purposes and projects. Some of the more common uses are closet poles, curtain rods and towel rods.

# PACIFIC COAST HEMLOCK

## PACIFIC COAST HEMLOCK MOULDINGS & BOARDS

Our mouldings and boards are made from Pacific Coast Hemlock. This fine grained softwood is native only to the Pacific Northwest. We start with the best fiber available in the market and perfect it in our quality driven hemlock mill in Ferndale WA, creating the IDEAL stain grade product. Our Pacific Coast Hemlock is:

- Machined within the strictest tolerances to reduce the amount of prep work needed.
- Perfectly suited to accept a full range of finishes due to its light, uniform color.
- Easily stained to match fine hardwoods such as cherry, mahogany, and walnut.

# PACIFIC COAST HEMLOCK

Pacific Coast Hemlock is the preferred choice of craftsmen due to its superior characteristics:

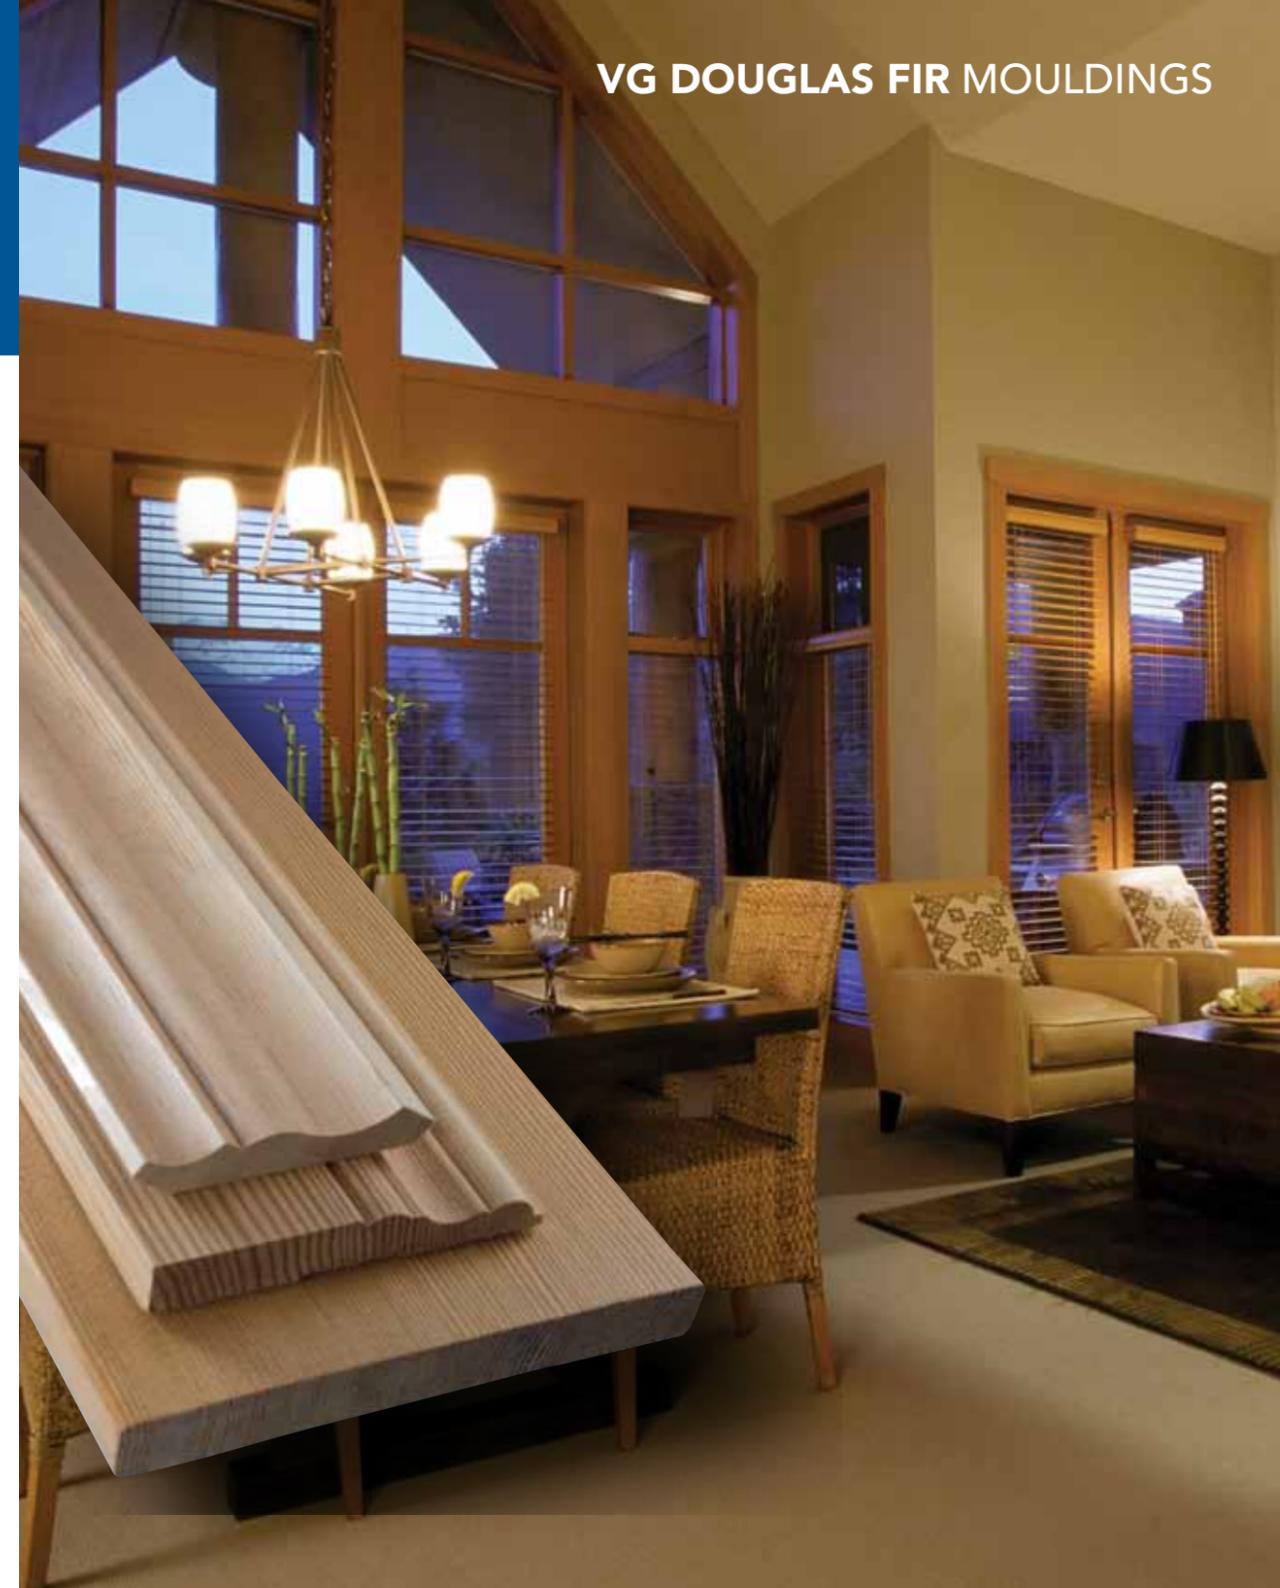

- Pitch and resin free, it accepts a variety of stains exceptionally well, allowing you to achieve a variety of high end looks with one product.
- Its tight grain holds nails or screws with no concerns of cracks or separations.
- Vertical grain boards offer an attractive look and smooth texture while providing maximum durability.

## QUALITY YOU CAN TRUST

- Our S4S boards are moulded on all 4 sides in our state of the art facility to the same quality and consistency of our Hemlock mouldings.
- Our premium product is available in long length structures (up to 20')

## VG DOUGLAS FIR MOULDINGS

## VG DOUGLAS FIR FINE GRAIN MOULDINGS

- Strong Softwood of Medium Hardness
- Stains and Finishes Beautifully
- Easily Worked with Power Tools
- An Overall High-end Product

Casings

Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.

# DOUGLAS FIR

## DOUGLAS FIR MOULDINGS & BOARDS

Historically revered for its strength, durability, and natural beauty, Douglas Fir has long been recognized as the premium softwood. Our Clearwood manufacturing division is located minutes away from the best fiber sources available, and is exclusively focused on manufacturing a full range of Douglas Fir mouldings, boards, door & window components, and specialty millwork accessories. Our Douglas Fir is:

- Precision machined to the strictest tolerances, providing a consistent, reliable product needing minimal prep work.
- Ideally suited to clear-coat finishing that highlights its distinctive grain and color.
- Takes and retains both stain and paint exceptionally well.

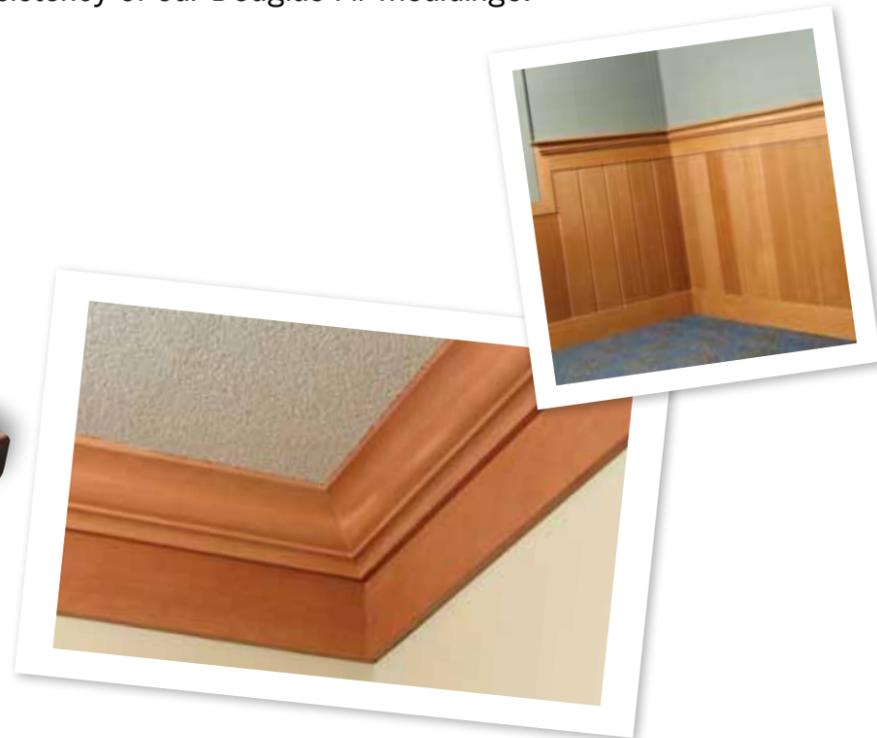

# DOUGLAS FIR

Douglas Fir is prized by builders and craftsmen alike for its superior characteristics:

- The distinctive coloration provides warm, rich and elegant hues that require minimal stain and often only clear-coating to enhance its natural appearance.
- Its straight grain and consistent texture make for excellent workability.
- Exceptional for both interior and exterior applications, it has both the beauty and durability needed to provide a refined finish that stands up to the elements.

## QUALITY YOU CAN TRUST

- Our S4S boards are moulded on all 4 sides in our state of the art facility to the same quality and consistency of our Douglas Fir mouldings.

## ULTRALITE LDF MOULDINGS

## ULTRALITE LDF MOULDINGS

- Light Weight
- Installs with Ease
- Superior Paintability
- Superior Workability

Casings

Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.

### Chair Rail, Paneling, Cap, Opening Trim & Stops

Chair Rails are practical as well as decorative. Applied to a wall, from 24 to 48 inches up from the floor, they protect the wall from scuffs and dents from the backs of chairs as well as adding a distinctive accent to any room.

Paneling is generally installed in the area below a chair rail. Combined with a chair rail and baseboard, Paneling creates a dramatic look to any room.

Opening trims such as 9531 & 9532, are commonly used to accent window and door casings, and are used in conjunction with S4S flat stock to create a craftsman style classic header detail.

The Door Stop mouldings are attached to the door jamb on both sides and at the top. It is where the door comes to a rest when it is closed, covering the gap that would otherwise appear between the door and the jambs.

Quality LDF Mouldings

**Ready to install professional grade LDF moulding with a high quality finish that's Platinum Prime every time.**

Moulding & Millwork's LDF Moulding Group currently consists of 3 quality-driven manufacturing facilities located in both Canada and the United States. With a combined output of over 4 million linear feet per week, Moulding & Millwork is one of the largest manufacturers of LDF mouldings in North America.

[www.mouldingandmillwork.com](http://www.mouldingandmillwork.com)

making interiors spectacular

**Product Benefits:**

- Defect free
- High quality raw material
- Smart length supply
- Domestic manufacturing
- Platinum Prime finish

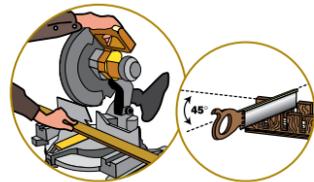

Quality LDF Mouldings

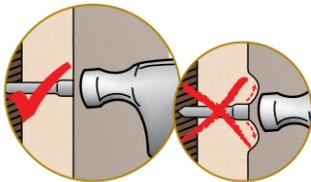

Platinum Prime is the Secure Supply Solution.

**Superior Workability**

- Platinum Prime mouldings have the handling and machining qualities of fingerjoint pine
- It copes and miters with ease
- Does not chip or split

**Installs with Ease**

- Platinum Prime nails like fingerjoint
- Platinum Prime will not volcano (unlike standard MDF)

**Superior Paintability**

- With quality paint, one coat is often enough
- No grain raise
- Less paint for total coverage

**Responsible Choice**

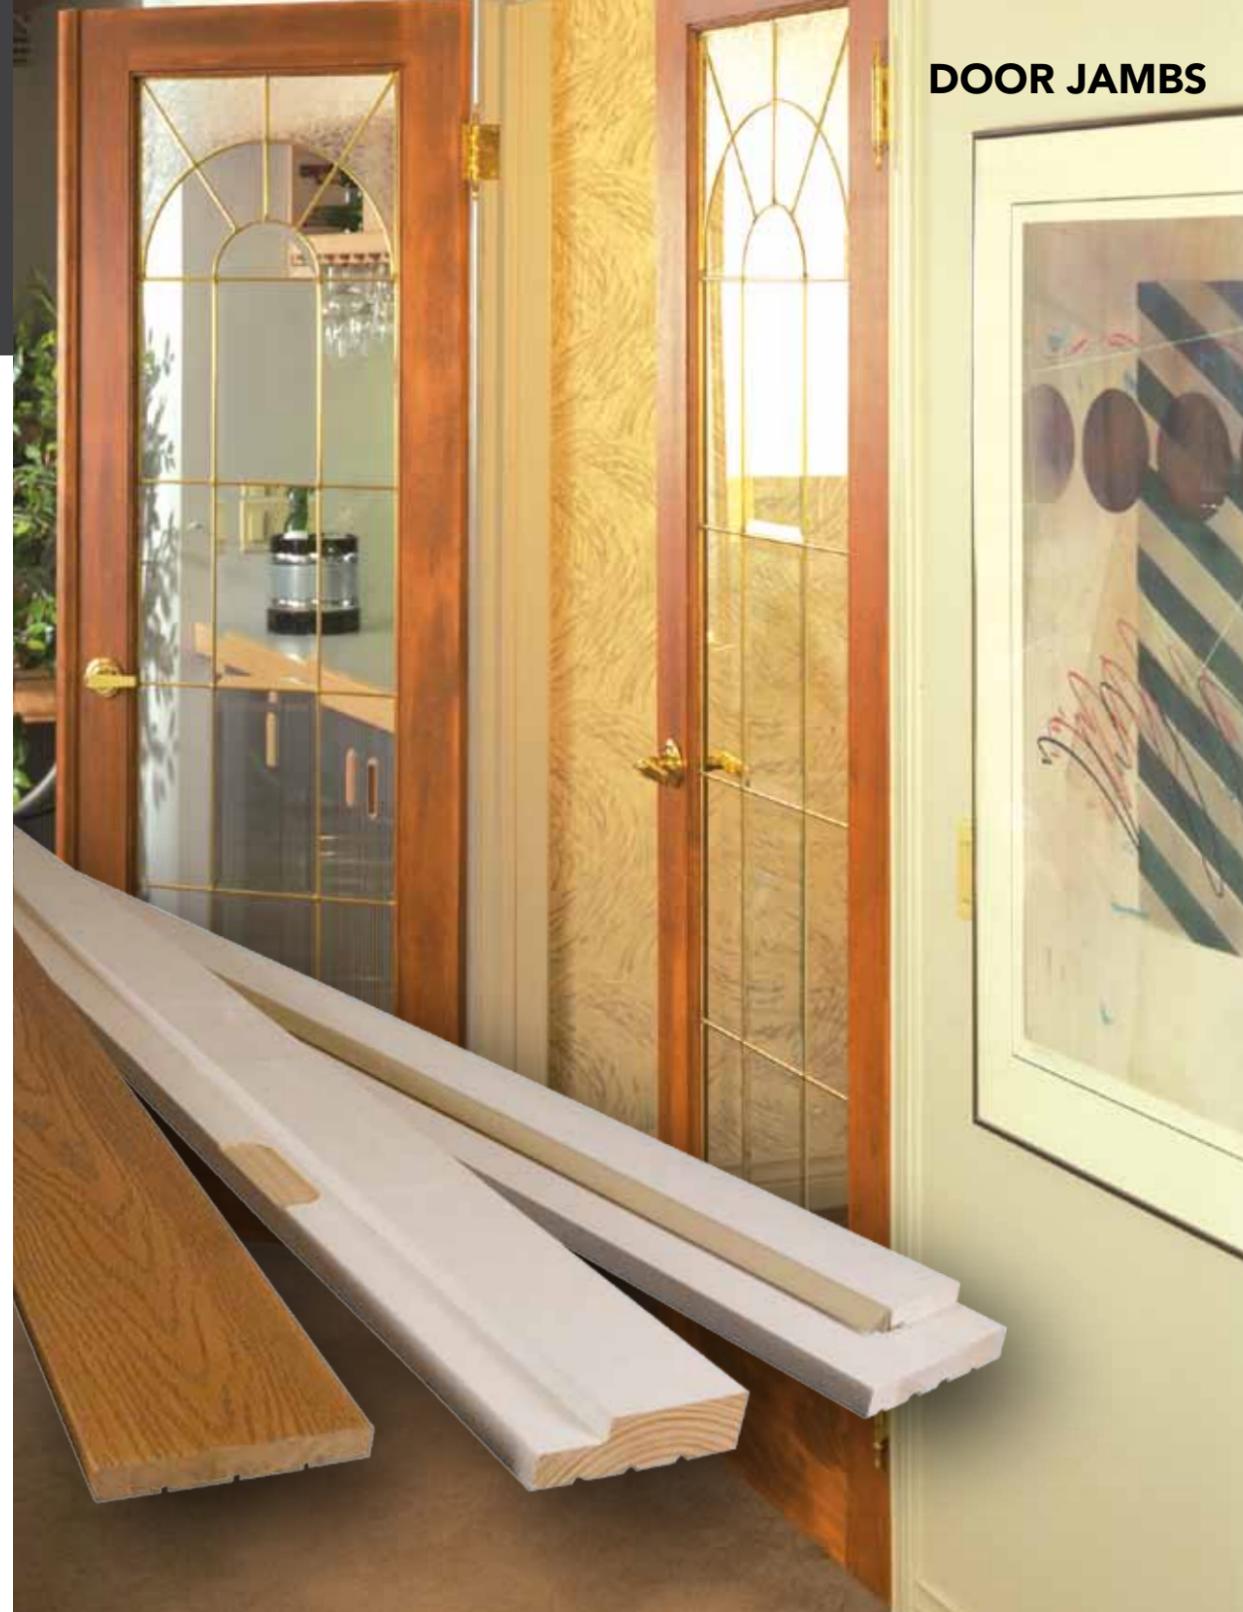

- 100% pre-consumer recycled product
- Low emission Water-based finish
- Substrate is SFM or FSC certified and qualifies for LEED credits according to the USGBC

PANELING/WAINSCOT

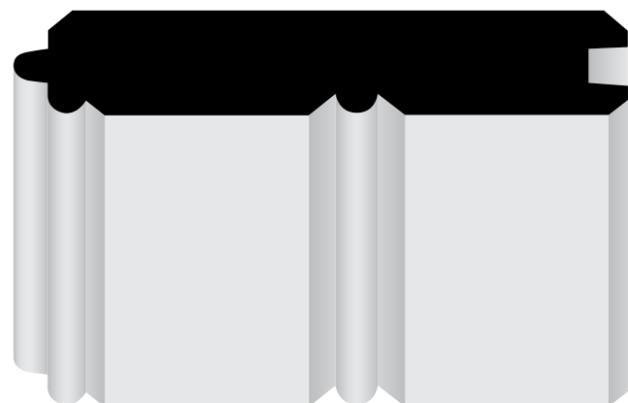

PANELING & WAINSCOT

- Adds character and detail to any room
- Reversible patterns allow for a wide variety of designs
- Excellent for hallways, kitchen & bath enhancement

**Wainscot**

Traditionally paneling is installed in the area below a chair rail. Numerous options are available including raised panel, shadow box and beaded. Combined with a chair rail and baseboard, Wainscoting creates a dramatic look to any room. All of our paneling profiles are reversible, allowing you to create a variety of patterns and details.

### Casings

Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.

ALL SIZES NOMINAL

<b>MTEK356</b>	<b>BDL</b>

<b>MTEK495</b>	<b>BDL</b>
11/16" x 3-1/2" - 16'	FinTek 10

### Baseboards

Baseboards are placed along the wall at the floor. They should be chosen to work in harmony with your casings to finish and tie the room together. Baseboards are usually thinner than the casing.

ALL SIZES NOMINAL

FinTek mouldings give a high quality painted look to your project.

For best results we suggest:

- Use a high quality 80 tooth carbide saw blade
- Use a 23 gauge nail gun that delivers a 2" headless pin.
- Clean your moulding surfaces before using touch-up solutions
- Enjoy when done!

## Opening Trim & Architraves

An Opening Trim is a narrow strip of wood used to cover joints or as decorative vertical members over plywood or wide boards.

In classical architecture, the architrave described the main beam resting on the tops of the columns. Today it is often used as a decorative moulding for ornamentation or finishing at the top of windows and doors.

**MOULDING & MILLWORK**

making interiors spectacular

**FinTek™**

Pre-Painted Moulding Solution

FinTek™ products are pre-painted with a professionally smooth and durable finish. All you have to do is install, touch-up and enjoy. It is the ideal choice for both do-it-yourselfers and professional installers.

[www.mouldingandmillwork.com/fintek](http://www.mouldingandmillwork.com/fintek)

- Smooth Professional Finish
- Washes Easily
- Saves Time & Money
- Environmentally Responsible

**SUPERIOR DURABILITY!**

**Installs with Ease**

Cut your **FinTek™** mouldings to length with the compound miter saw and install using a finishing nailer.

Prior to filling of nail holes we suggest thoroughly cleaning and removing all dust and debris from the moulding surfaces. In addition make sure all tools and applicators are clean and free of debris.

Fill all holes with **FinTek™** colour matched wax fill stick. Build up a small amount of wax over each hole to ensure it is completely filled.

Look for visible seams and gaps and fill with **FinTek™** colour matched putty. Press putty into the seams and gaps until the putty fills the void.

Return back to the filled nail holes and with firm pressure scrape the excess wax and putty off with the **FinTek™** plastic scraper card making sure not to remove the wax and putty from the hole.

Apply a small bead of **FinTek™** colour matched caulking over shadow lines and seams between the wall and moulding. Follow all instructions on the tube.

Finally go back and touch up any areas as needed with the **FinTek™** colour matched spray enamel making sure to protect the surrounding area from overspray.

**Quarter Round, Cove, Squares, Screen**

Quarter Rounds come in several sizes and serve a variety of functions. They are most often used with baseboards.

Coves are commonly used to soften the transition on inside corners but may be used for a wide range of applications.

Squares and Parting Beads are used in a wide range of applications including filling gaps and transitioning heights. This profile may also be used in a variety of craft projects.

A very versatile profile; Screen Mould fits a wide variety of needs and uses. Traditionally used to hold mesh screening into wood screens, it also works well as edge trim on various shelving or wood trim for wall finishes.

**Stops & Handrail**

The Door Stop mouldings are attached to the door jamb on both sides and at the top. It is where the door comes to a rest when it is closed stopping the door from moving any further, and covering the gap that would otherwise appear between the door and the jambs.

Handrails provide safety and support.

## SPERO ECO-WISE MDF MOULDINGS

Contains no urea-formaldehyde  
Meets CARB Phase II requirements

Minimum 80% Pre-Consumer Recycled Wood Content (dry weight basis)  
harvested from responsibly managed forests

Manufactured domestically

Platinum Prime™ premium finish

Qualifies for LEED™ credits

## A GREEN BUILDING-COMPLIANT ALTERNATIVE

Moulding & Millwork is proud to be leading the way in providing a low emission Green Building-compliant solution to MDF mouldings and boards. Utilizing leading edge resin technology that contains no urea-formaldehyde, SPERO™ products are designed to meet or exceed the most stringent environmental emissions standards in the World including California Air Resources Board (CARB) Phase II requirements (HCHO Emission: ≤ 0.05 PPM\*). In addition, SPERO™ products are made from a minimum 80% Pre-Consumer Recycled Wood Content (dry weight basis) (SCS certified).

\*ASTM E-1333

### A Green Alternative to MDF for a Healthy Home

- Low-emission Green Building-compliant solution to MDF qualifies for LEED™ credit. This product will qualify for LEED™ credit as a “Low Emitting Material” under the indoor air quality provision EQ 4.4, for “Recycled Content” under MR 4.1 and 4.2
- Leading edge resin technology that contains no urea-formaldehyde
- Meets or exceeds the most stringent environmental emissions standards in the world including California Air Resources Board (CARB) Phase II requirements (HCHO Emission: 0.05 PPM).

### A Sustainable Product for a Healthy Planet

- SPERO™ is made from a minimum 80% Pre-Consumer Recycled Wood Content (dry weight basis) (SCS Certified).
- SPERO™ qualifies for LEED™ credit for “Recycled Content”, when applicable for “Local/Regional Materials” under MR 5.1 and MR 5.2.

### The Highest Quality Mouldings Now Available in Green

- SPERO™ products are milled in Moulding & Millwork’s quality driven MDF manufacturing facilities in both the United States and Canada.
- Platinum Prime™ smooth paint and go finish
- Smooth machined profiles and edges
- Precise tolerance standards

# Green Initiatives

## ROSETTES & BASE CORNERS

MOULDING & MILLWORK INC. AND OUR AFFILIATED BUSINESSES ARE COMMITTED TO SUSTAINABLE BUSINESS PRACTICES.

We are proudly promoting the use of certified, low emitting, and recycled wood products, including our new SPERO™ moulding line.

In addition, we are setting up Sustainable Operating Standards, which includes responsible manufacturing processes, chain of custody certifications, recycling programs, energy reduction programs, low carbon emission vehicle fleets, and memberships to regional and national “Green” councils.

Moulding & Millwork, through our manufacturing facilities and affiliates, have the ability to provide products that may contribute to LEED rating points in the following areas:

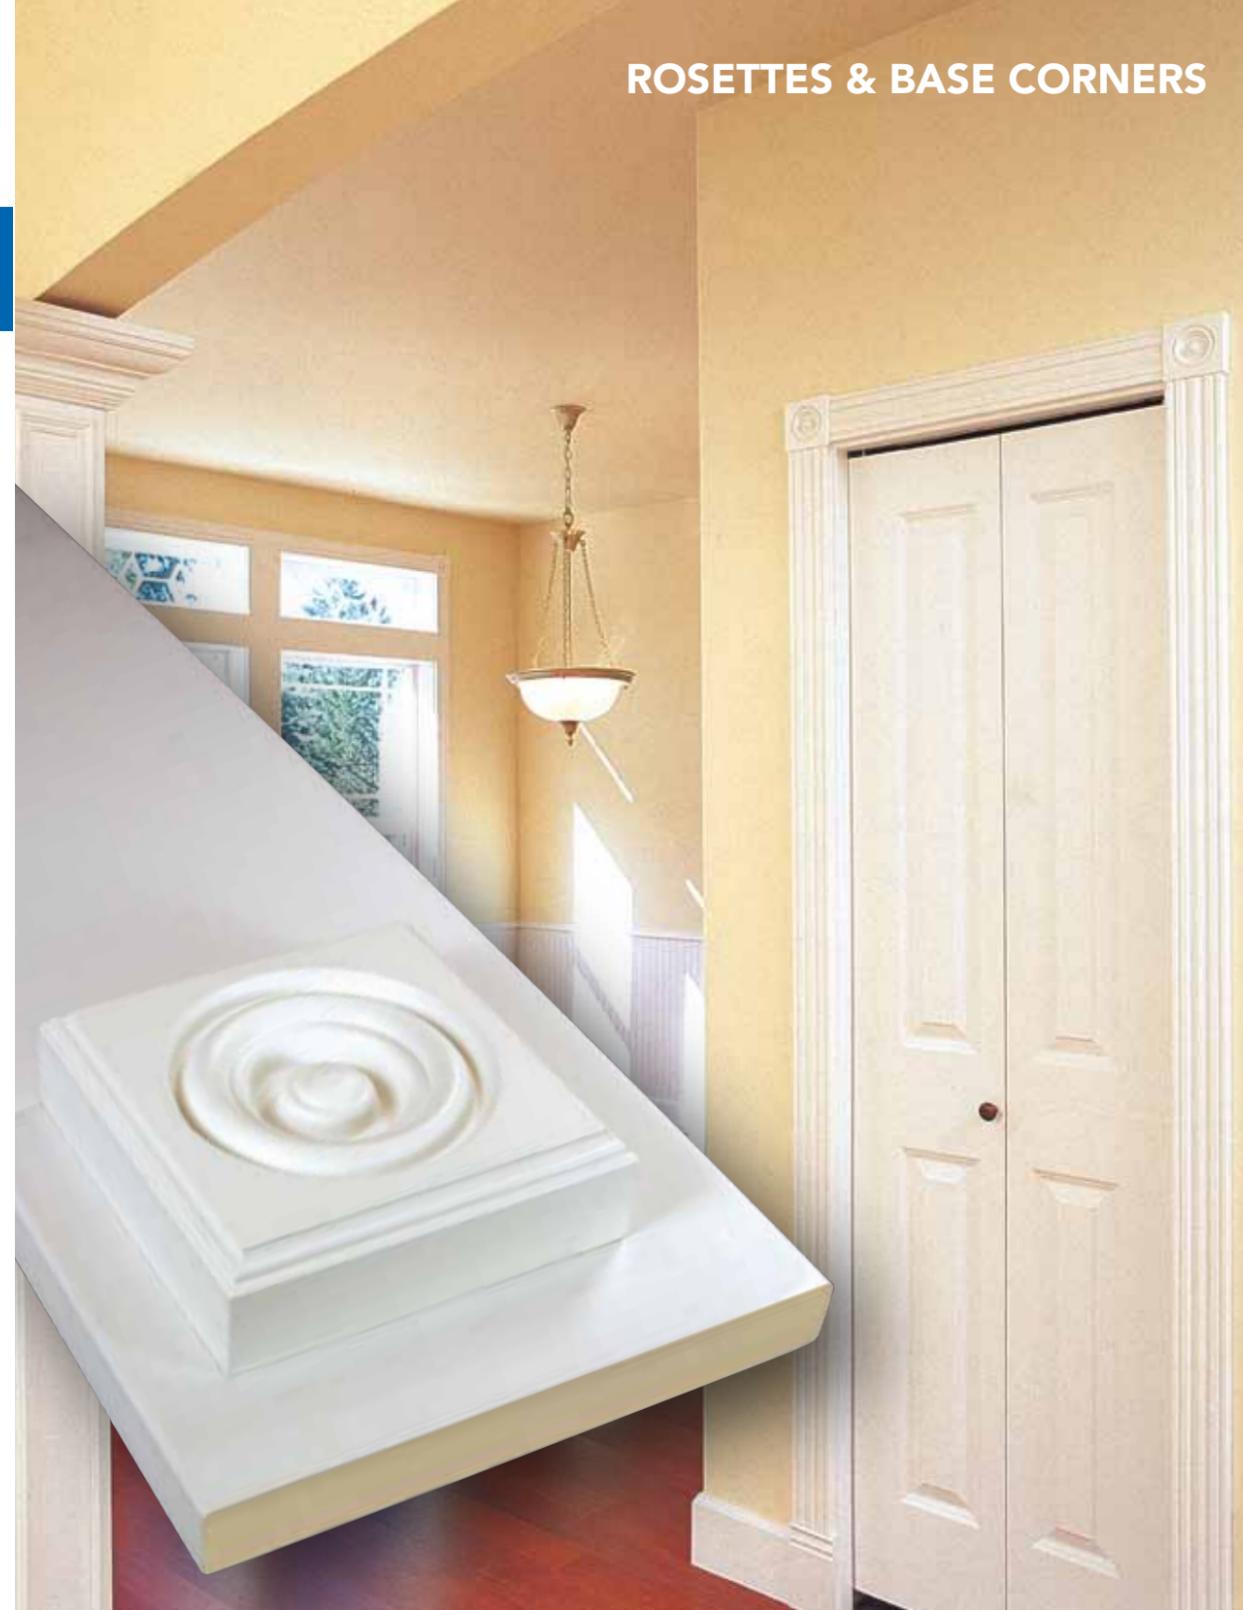

- Materials & Resources, 4.1, 4.2, 5.1, 5.2, 7
- Indoor Environmental Quality, 4.4

### STORAGE, HANDLING AND PREPARATION OF ALL MOULDINGS AND S4S BOARDS

Until the time this product has been correctly **final coated (after painting or staining)** and installed, in conformance with all paint manufacturer recommendations as well as the highest and best building practices, respectively, for intended use, it must be **continuously and effectively protected from exposure to direct sunlight, ground contact and the elements**. It should be **stored only in a dry, clean location and transported only if fully protected from water**. As a final preparation before installation: **(a) indoors, the product must be "acclimated" to the environment by storing it in the installation space for at least 3 days** (with both faces exposed to the air in that space); **(b) outdoors, every surface lacking both primer and final coat must be effectively coated** to achieve protection recommended by the paint manufacturer respecting intended use.
